the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques.

Both of these methods have their own problems. Increasing the amount of land used for agriculture can lead to deforestation and the loss of biodiversity.

Increasing the efficiency of food production can lead to the use of more pesticides and fertilizers, which can be harmful to the environment.

One solution is to use a combination of these methods. This would involve using better farming techniques on existing farmland and also using more land for agriculture.

Another solution is to reduce the amount of food that is wasted. This can be done by encouraging people to eat less meat and by reducing food waste.

Both of these solutions have their own problems. Reducing the amount of meat eaten can lead to the loss of jobs in the meat industry.

Reducing food waste can lead to the loss of jobs in the food industry. However, these solutions are necessary if we are to meet the world's growing demand for food.

One way to reduce food waste is to encourage people to eat less meat. This can be done by promoting vegetarianism and by reducing the amount of meat that is served in restaurants.

Another way to reduce food waste is to encourage people to buy less food. This can be done by promoting smaller portions and by encouraging people to buy only what they need.

Both of these methods have their own problems. Encouraging people to eat less meat can lead to the loss of jobs in the meat industry.

Encouraging people to buy less food can lead to the loss of jobs in the food industry. However, these methods are necessary if we are to reduce food waste.
